

Welcome!

Thanks for purchasing a Gamer Concepts Mechanist line of model kits.

Materials Needed:

- Wood Glue for the facia (I use 2P10 super glue for quick drying times but you can use what ever you like.
- Sandpaper (220, 320 or 400 grit is good).
- A tealight or some other hard wax. Soft wax such as beeswax is too sticky.
- A sharp utility knife

A few guidelines:

Some parts separate from the wood sheets easily. Some will need a little help with a knife, especially the smaller parts.

Moving parts will need a little sanding and waxing to ensure smooth movement. In the directions; blue lines denote waxing, red lines are to be sanded, and purple lines are both.
